All About Frogs

A grown-up reads the text aloud, then reads each question. Circle or draw the answer.

READ ALOUD

Frogs are animals that live in and near water. A frog starts out as a tiny egg in a pond.

The egg hatches into a tadpole. A tadpole has a tail and swims like a fish. Little by little, it grows legs, and its tail goes away. Now it is a frog!

Frogs have long, strong back legs, so they are great jumpers. A frog can jump many times its own length.

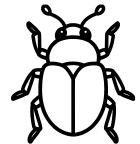

Frogs catch bugs with long, sticky tongues. Zap! The bug is gone.

1 What is this mostly about?

2 What do frogs eat?

3 Frogs are great jumpers. What helps them jump?

4 Does a frog start out as an egg?
