

Name _____

Date _____

Busy Bees

A grown-up reads the text aloud, then reads each question. Circle or draw the answer.

READ ALOUD

Bees are small insects with four wings and six legs. Many bees live together in a home called a hive.

Bees fly from flower to flower. They drink a sweet juice inside the flowers called nectar.

Back at the hive, bees turn the nectar into honey. Honey is food for the bees in winter.

Bees help flowers, too. Yellow dust called pollen sticks to their fuzzy bodies and rides along to the next flower. That helps new seeds and fruit grow.

1 What is this mostly about?

2 Where do bees find their food?

3 What do bees make?

4 Do many bees live together?

yes

no
