Date _____

What Is Rain?

A grown-up reads the text aloud, then reads each question. Circle or draw the answer.

READ ALOUD

The sun warms the water in lakes and seas. Tiny bits of water rise up into the sky and gather into clouds.

When a cloud gets full and heavy, the water falls back down. That is rain!

Rain gives plants and animals the water they need to live and grow.

On rainy days, an umbrella and boots help us stay dry. And when the sun comes out after the rain, look up. You might see a rainbow!

1 What is this mostly about?

2 What helps us stay dry?

3 What might you see after the rain?

4 Does rain help plants grow?
